DETAILED ACTION

1. Claims 1-32 are presented for examination.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-28 are rejected under 35 U.S.C. 102(e) as being anticipated by **Ghodoussi et al.** (U.S. PG Pub. 20030144649 A1).

As per claims 1-28, **Ghodoussi et al.** teaches “A tele-medicine system that includes an input device which can control a medical system. The input device may be the handle of a surgeon console. The medical system may include a robotically controlled medical device. A transmitter may transmit information relating to each state of the input device over a communication network. The medical system receives the transmitted state information through a receiver. The medical system changes state in response to the received state information from the input device. The system sends information relating to an entire state of the input device over a sample period to insure that the medical system receives all commands, data, etc. necessary to

operate the system.” Which equates the limitations of a robot system and an associated method wherein a robot that has a camera that captures a first video image and a monitor that displays a second video image; a remote station that has a monitor that displays the first video image and a camera that captures the first video image, and an input system that allows a consultant to generate consultant information and robot movement commands that are transmitted to said robot. (see Ghodoussi’s et al. reference), bear in mind that the surgeon being considered as a consultant; voice command of section [0033] of Ghodoussi et al. being performed through a microphone and a speaker combination. The network provided in Ghodoussi et al. being considered as broadband network.

Allowable Subject Matter

4. Claims 29-32 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. The following is a statement of reasons for the indication of allowable subject matter:

The prior art of record fail to teach or fairly suggest a method for providing consulting services through a remote robot comprising the step of viewing at eh robot a second video image of a consultant located at the remote station.

6. Any inquiry concerning this communication or earlier communications from the
